

AI IN EDUCATION

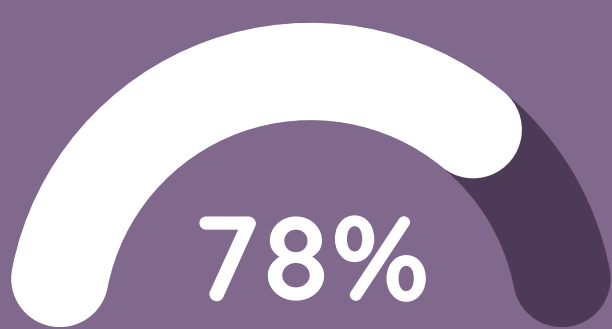

AI helps with teaching more than you think

Artificial intelligence tools, whether they be chat bots students interact with, or systems that use statistical analysis and automated grading to assist educators with running their classrooms, are invaluable tools in the modern day.

What does AI help achieve in the classroom?

78%
of teachers reported increased engagement among students when AI learning tools were implemented

40%
of teachers stated that AI expedited grading times, especially with non-multiple-choice

2 in 5

2 in 5
students said that AI had a positive effect on their learning experience in and out of the classroom

40%

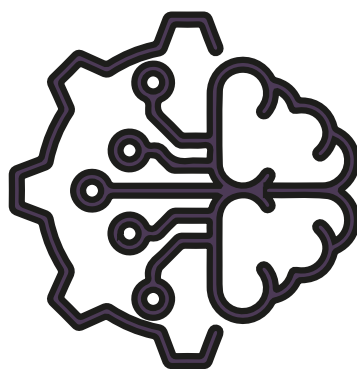

40%
higher retention for academic content when combined with artificial intelligence tools

What are the types of AI in use currently?

Natural Language Processing (NLP)

Neural Network

AI-Powered Learning Management System (AI-LMS)
